

Full Architecture Workflow

High Level Flow

User Input -> CLI Layer -> Source Collector -> Text Processor -> Company Intelligence Builder -> Competitor Intelligence Builder -> Recommendation Builder -> PDF Writer -> Output Report

Industry Structure

Layer	Responsibility
CLI	Argument parsing, interactive mode and self-test command
Services	Public source collection, source quality scoring and text processing
Intelligence	Company analysis, competitor scoring, recommendations and evaluation
Reporting	PDF and JSON output generation
Tests	Unit tests for utilities, builders, orchestrator and PDF output

Track Coverage

- Track 1 generates company intelligence, service signals, positioning and lead opportunities
- Track 2 generates competitor discovery, competitor ranking, risk signals and gap opportunities
