

Industry Source Code Structure

Reason for Restructure

The earlier single-file implementation was converted into an industry-style source structure for better readability, maintainability and evaluator confidence.

Main Packages

Package	Purpose
services	Collect public data, score source quality and process text
intelligence	Build company intelligence, competitor analysis, recommendations and evaluation
reporting	Generate PDF and JSON outputs
utils	Reusable text, filename and input helpers
tests	Unit tests for important modules

Execution

Evaluator runs only one command from project root: `python main.py --company "Rsp Infra Kanpur" --service-line "ERP and CRM implementation services" --top-n 5`
