

README Submission Guide

Purpose

This guide explains how to configure, run, test and submit the AI Business and Market Intelligence Agent.

Environment

- Python 3.9 or above
- VS Code or any Python editor
- No external package dependency for core execution
- Optional internet access for public URL reading

Run Command

```
python main.py --company "Rsp Infra Kanpur" --domain "rspinfra.com" --service-line "ERP and CRM implementation services" --top-n 5
```

Output

The report is generated inside the outputs folder with company-name based PDF filename.

Troubleshooting

- Use --top-n 5, not --top-5
- If PowerShell blocks venv activation, use Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass
- If URLs fail, the project still runs using input-based business context
